1 The conflict zone around this area is of medium intensity partly because its accessed by mostly the Dassenech from either side of the border who are homogeneous, and the vastness of the pasture and water at the deltas of the L. Turkana
2 This is a high intensity epicenter which serves the Hamer, Gabra and Dassenech all of different ethnic background with no effective communal conflict resolution systems in place. the resources here are not that vast and competiion usually sets in quite easily
3 This resource system is of a medium intensity serving both the Gabra and Borana both of whom are fairly homogeneous and of similar ethnicity. There are fairly strong conflict resolution systems in place
4 This resource system is of a relatively low intensity similar to system 3 with strong reosurce sharing and conflict resolution mechanisms between the Borana and Gabra
